

Proposal for OpenCart Website Development

Client: Mis. Chandi

Prepared By: Rajith Malinada

Date: 26 May 2025

1. Project Overview

This proposal outlines the development of a feature-rich eCommerce platform using OpenCart 4.0.x with PHP 8.1, integrating modern design, essential retail and wholesale functionalities, and seamless synchronization with your existing POS system. The website will be built on the Journal Theme, ensuring a highly customizable and responsive front-end.

2. Project Goals

- Modern, scalable eCommerce website for both retail and wholesale customers.
- Seamless user experience with enhanced product filtering and pricing display.
- Efficient newsletter management to promote offers and new arrivals.
- Real-time synchronization with the current POS system to maintain inventory accuracy.
- Smooth product migration from the existing website.
- Integration with PayHere payment gateway for secure online transactions.

3. Key Features and Functionalities

3.1. Shopping Cart System

- Fully functional cart and checkout system.
- Guest and registered user checkout.
- Shipping and tax calculations.
- Multi-currency and multi-language support (if required).

3.2. Newsletter & Offer Promotion

- Newsletter module setup for collecting and managing subscribers.
- Option to send newsletters with product offers and embedded product links.
- Integration with Mailchimp or other email service (optional).

3.3. PayHere Payment Gateway Integration

- Integration of PayHere payment gateway for secure transactions.
- Testing and validation in sandbox and live environments.

3.4. POS System Sync

- Real-time or scheduled synchronization with current POS system.
- Syncing inventory, prices, and order data.
- Ensures accurate stock levels and reduces manual data entry.

3.5. Retail & Wholesale Pricing

- User group-based pricing (Retail / Wholesale).
- Login-based visibility for wholesale prices.
- Tiered pricing support based on quantity or user role.

3.6. Product Migration

- Migration of products, categories, images, and basic data from the current website.
- Data cleansing and formatting during migration.

3.7. Enhanced Product Listing and Filters

- Custom filters for categories (e.g., size, brand, price range, etc.).
- Improved product listing design with Journal Theme capabilities.
- AJAX filtering and sorting for better user experience.

4. Technical Stack

- Platform: OpenCart 4.0.x
- Language: PHP 8.1
- Frontend Theme: Journal (Latest Version)
- Database: MySQL
- Server Requirement: Compatible hosting with PHP 8.1, OpenCart 4.x, SSL

5. Timeline

Task	Estimated Duration
Requirement Finalization	2 Days
Journal Theme Setup & Configuration	3 Days
Payment Gateway Integration (PayHere)	3 Days
POS Sync Development	4–5 Days
Product Migration	3–4 Days

Newsletter Setup	5 Days
Filter & List Customization	3 Days
Testing & Final Deployment	3 Days
Total Estimated Duration	28–32 Working Days

6. Cost Estimate

A detailed quote will be provided upon reviewing your current POS system and website database. The estimated total cost for the complete development is: LKR 170,000.00 (including with template cost USD 79)

7. Support & Maintenance

- Free bug fixing for 1 month after deployment.
- Optional monthly support/maintenance packages.

8. Deliverables

- Fully functional OpenCart 4.0 website with Journal Theme.
- POS integration module.
- Product migration report.
- User documentation for managing filters, prices, newsletters, and orders.
- Admin training session (online or offline).

9. Conclusion

This proposed development will enhance your current online presence, boost efficiency through automation with your POS, and offer a better customer experience for both retail and wholesale clients. We are committed to delivering a robust and scalable solution that aligns with your business goals.
